

Fool Me Twice: Fighting the Assault on Science

Whenever the people are well informed, Thomas Jefferson wrote, they can be trusted with their own government. But what happens in a world dominated by complex science? Are the people still well-enough informed to be trusted with their own government? Jefferson thought it required no very high degree of education, but that was two centuries ago. But today, science influences every aspect of life, and world governments ineffective policies around science are leading to compounding problems. There is a growing science gap between the power of science and the knowledge level of people in world democracies. Can democracy survive in the age of science? Shawn Lawrence Otto is the driving force behind the US Presidential Science Debates, which became the largest political initiative in the history of science the idea that the candidates for president and other high offices should debate the worlds top science issues. It is an idea that has since been adapted in several other nations around the globe. Otto has written a behind-the-scenes look at how the government, our politics, and the media prevent us from finding the real solutions we need. Fool Me Twice is the clever, outraged, and frightening account of democracys relationship with science a relationship that is on the rocks at the very time we need it most.
