I secured a single specimen, a female, in the Sai valley, on the 19th December. No others were seen. 198--iEgialitis cantiana, Latham. (848.) I procured a male in adult plumage on 13th August. 199--iEgialitis philippensis, Scop. (849.) JEgialitis curonica, Gmel. I shot a number of specimens of this Plover in the first half of August. 200 a.--iEgialitis jerdoni, Legge. (850.) I procured two specimens of this Plover, both females, one on the 11th May, and the other on the 27th September. It is also slightly smaller, and the female is smaller than the male; whereas in Je. curonica the female is the larger. 208 a.--Ibidorhynchus struthersi, Vigors. (879.) On the 6th August I procured a young female in immature plumage in Gilgit. 209--Machetes pugnax, Lin. (880). I obtained four specimens in the beginning of August, and observed others. They all show dark markings on the breast and flanks. 209 a.--Tringa acuminata, Horsf. (883 bis.) I shot a single specimen, a male, in adult plumage, in Gilgit on the 1st August. It was flying about with a number of Machetes pugnax. It measured:--Length, 875 inches; wing, 5-25; tail, 25; tarsi, 1/3; culmen, 105.
